

Detox Pads

By BodyPure

Standard Use:

Initially, BodyPure®+ should be used nightly (on one foot) for a recommended period of thirty days. Individuals who feel that they have been exposed more extensively to toxins may choose to prolong the 30 day period or use patches on both feet. After the initial cleansing period, simple maintenance is recommended (one patch every two to three weeks).

Ingredients:

BAMBOO VINEGAR EXTRACT.

The quality of their product is based on the purity of the Vinegar extract. The extract used in BodyPure®+ is condensed five times and contains no synthetic vinegar or starch. After the initial extraction process, the extract is dried for a period of six months. It is then filtered four times using the highest quality Umbamegashi-Binchou Charcoal. It is then dried one more time for an additional six months before it can be considered for use. This process yields a very concentrated extract with an extremely high level of purity.

HOUTTUYNIA CORDATA EXTRACT.

The plant is found in Japan, Java and Nepal at altitudes of over 6200 feet. It contains a variety of flavoids, flavonoid glycosides (afzerin, quercitrin, isoquercitrin) and pyridine alkaloids; the essential oil was found to consist mainly of decanal (capryl aldehyd), dodecanal (lauryl aldehyd) and 2-hendecanon (methyl nonyl ketone). Since ancient times it has been valued for its absorption properties.

LOQUAT LEAF EXTRACT.

The Loquat leaf contains malic acid, tartaric acid, citric acid, tannate, carotene, vitamins A, B and C. Its leaves and kernel contain amygdalin (amygdalin is otherwise known as vitamin B17, or laetrile). It promotes the secretion of body fluids and has antitussive, expectorant, antiemetic properties. It has 3000 years of history in muxeibustion therapies and has been used extensively in Buddhist medicine. In India it has been called the king of herbal medicine.

TOURMALINE

The name apparently comes from the Sinhalese word "Turamali" which was given to mixtures of unidentified gem gravels in Ceylon (now Sri Lanka) Tourmaline exerts a cleansing and liberating energy upon our entire nervous

system with a clearing and stabilizing effect. Tourmaline is best known as one of the only minerals to emit far infrared heat - which causes resonance in the body at the same frequency as water.

DIATOMACEOUS EARTH.

A powerful and natural absorbing agent, diatomaceous earth can generally absorb up to 100% of its own weight in liquid and still exhibit the properties of dry powder. In fact, its absorbent qualities make it useful for spill cleanup (the U.S. Center for Disease Control actually recommends it to clean up toxic liquid spills). Diatomaceous earth is a natural occurring siliceous sedimentary mineral compound, and has a soft, chalk-like feel to it.

CITRONELLA.

Often used in aromatherapy to clear the mind, citronella also possesses potent anti-bacterial and deodorizing qualities. Native to Sri Lanka and Java, this aromatic perennial (once extracted) has a softening effect on the skin, and helps to combat excessive perspiration, making it ideal for use on the feet.

DEXTRIN

Dextrin is a product of starch hydrolysis, a carbohydrate having the same general formula as starch but a smaller and less complex molecule with adhesive properties.
