

Dieters Choice for Carb Control

EuroPharma

Recommendations: One tablet three times daily with meals.

Stronger and More Concentrated for Superior Results

Each sure-release mini tab (patented) may assist in weight control by reducing the enzymatic digestion of dietary starches (carbohydrates). Therefore the calories found in carbs may not be absorbed, reducing your total intake of grams and calories on a daily basis. Reducing 500-1000 calories per day will assist you in losing 1-2 pounds per week.

Dieter's Choice for Carb Control is the only phaseolamin that is highly concentrated and purified so only 2 mg per meal is required, versus 1,000-1,500 mg from other extracts that are not concentrated and are not enteric coated. Sure-release enteric coating guarantees stomach acid survival and intestinal delivery so that the necessary activity of phaseolamin will reach the area of the lower intestine where amylase is released and digesting occurs.*

A long-lasting weight loss program should include a balanced nutrition plan and regular exercise. As with any weight loss program, consult a physician.

Ingredients

| Supplement Facts | | |
|--|----------------|-------------|
| Serving Size: 1 Sure-Release Mini-Tab | | |
